

A well-posed finance problem

"A company takes out a one-year loan of \$200,000. The bank charges 6% annual interest. How much interest will the company owe after one year?"

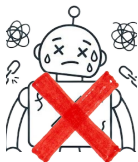

$$\$200,000 \times 6\% = \$12,000$$

ABSENCE

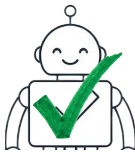

CONFLICT

*...The bank charges
[no rate given] annual
interest....*

*...The bank charges 6%
annual interest....The
bank charges 9%...*

$$\$200,000 \times 6\% = \$12,000$$

The interest rate is not
given..!
